Thank you for purchasing the static ports. This product is to be installed on **EXPERIMENTAL AIRCRAFT** only and does not carry FAA certification. The installation location should be determined by the aircraft kit manufacturer. When a suitable location has been determined drill a ¼" hole in the aircraft skin, insert the static port and secure with provided lock washer and nut. Torque nut to a maximum of 25 inch pounds, be cautious not to side load the nut/port causing skin distortion. Installations in reinforced composite structure should forgo the nut/washer and glue in place. This static port is designed to be used with nylon, polypropylene and other common ¼" OD x .170 ID tubing. Push tubing on the static port with medium pressure and plumb static tubing per aircraft instructions.
