

Thank you for purchasing the TMC-04s throttle/mixture control cable bracket. This bracket is designed to mount to the bottom of the Superior cold air sump and allow throttle/mixture control cable attachment to Airflow performance FM-150, FM-200 or FM-200A fuel servo. The bracket is designed for ACS style engine control cables and attachment clamp P/N 10464. There are two separate throttle cable mounting locations and three separate mixture cable mounting locations depending on the model of fuel servo used. Please refer to the figure below for exact mounting locations.
